## ERP - U8 Product Overview

**UFIDA ERP-U8** is an integrated ERP solution for small and medium-sized enterprises, and one of the most widely used business systems in the Asian market. Hundreds of thousands of customers in a multitude of industries have successfully implemented U8. One of U8 key objectives is to help SMEs smoothly synchronize front and back office business management functions. For rapidly growing companies change is the rule rather than the exception. Therefore, from the beginning, U8 was designed with the flexibility to allow customers to innovate and adapt their management solutions to reflect changes. Growing companies need to see concrete results quickly, so they typically do not have time for drawn-out implementations. With this in mind, U8 is designed to be put into action with a short learning curve, and clients will see real results within weeks.

## ERP - U8 Main Modules and Functionality

# Supply Chain Management

**U8** Supply Chain Management captures all key supply chain activities. Together with our unique platform, it provides a single, accurate view of your entire supply chain, so you can enforce lean principles across increasingly complex, global supply chains, reduce the cost and time of purchasing and manufacturing, and increases business efficiency. Modules include Contract Management, Purchasing Management, Outsource Management, Pre-sales Management, Sales Management, Export Management, Inventory Management, Quality Management, Inventory Reconciliation, Quality Management.

## Main Modules and Functionality

**CRM:** Customer database, sales opportunity, sales process, marketing and service information, sales analysis;

**Sales Management:** Sales plan, quotation and pricing scheme, sales orders, sales delivery, invoice, sales expenditure control, analysis and reports;

**Inventory Management:** Inventory receipt for stock in or out, moving, inventory allocation, lot and serial number, multi-type transactions and checking stock, inventory reports and analysis;

**Inventory accounting:** Receipt cost, issue cost and inventory cost, six types of cost valuation, stock revaluation, posting to GL;

**Purchasing Management:** Supplier, purchase request, purchase order, arrival and receipt, invoice, settlement, return processing, connected to A/P, reports and analysis;

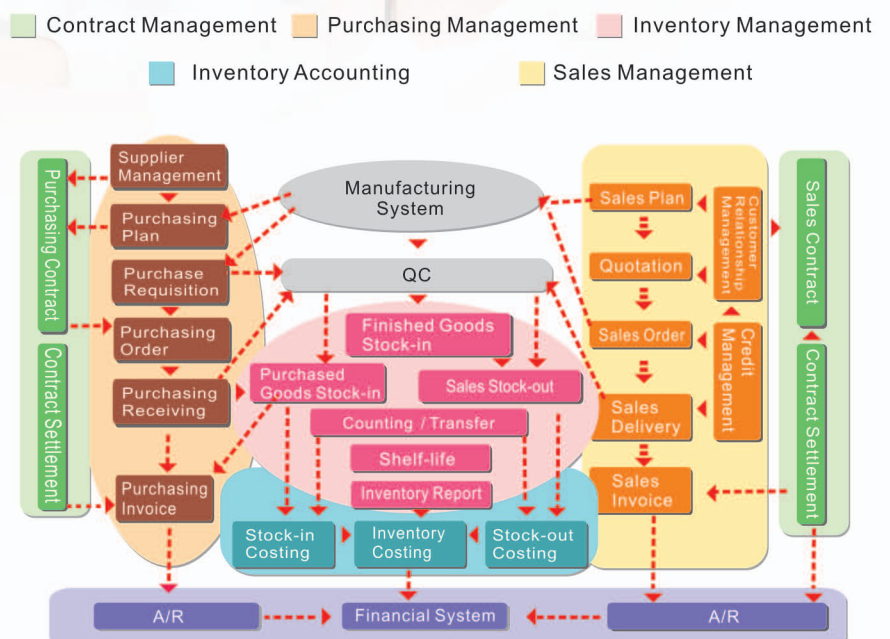

**Contract Management:** Contract entry, approval, change and settlement, total contract documents and terms, reports, and integrated with AP/AR/Sales;

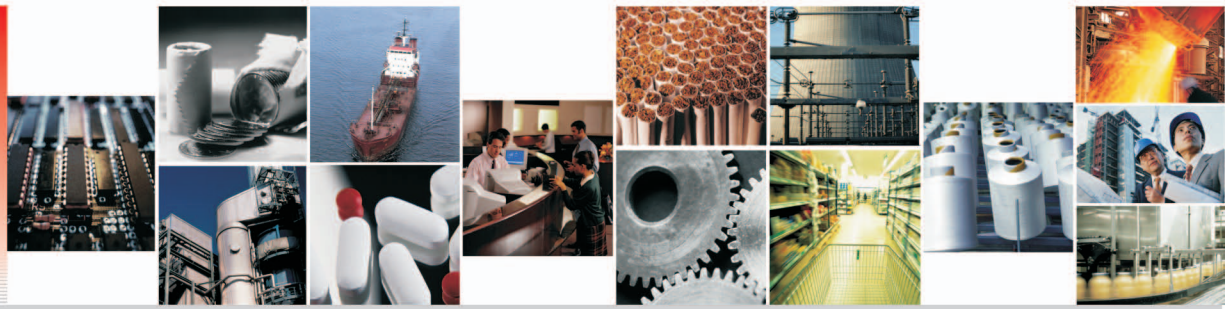

**Outsourcing Management:** Outsourcers database, outsourcing order, arrival, invoice and settlement;

**Quality Control:** GSP quality, item inspection and processing

## Selected Features

- ◆ Complete supplier assessment feature, incorporating historical data, prices and quotes;
- ◆ Covers the whole lifecycle of contract and provides alarms throughout the contract process;
- ◆ Three kinds of purchasing management and sales management: general purchasing and sales, sale on commission basis and direct shipment;
- ◆ Supports the general and special inventory business, bar code data entry, batch orders, quality control, inventory position, inventory movement, etc;
- ◆ Extensive quality checks and processing of unqualified goods

## TOP 5 Reasons for Choosing **UFIDA ERP - U8**

### Ease of Use

In addition to rapid implementation, U8 also offers an enterprise the ability to implement the solution without interruption to daily business.

### Highly Adaptable to Changing Business Requirements

U8 works in concert with our clients to adapt to changing market conditions. Our business philosophy: "Be loyal and reliable friends to clients through sincere cooperation"

### Deploy today, Scale tomorrow

SMEs can effectively deploy U8 at any stage of organizational development and, based on business need and/or planned growth, quickly add depth to the solution.

### Asia's Best in Class Know-how

The U8's tremendous customer base in Asia includes SMEs of most any size, industry, region and developmental stage. U8 represents 18 years of accumulated knowledge from this customer base. This process of continuous enhancement has made U8 into the best in class solution.

### Easy Integration and Extension

U8 provides an open architecture such as EAI to support the client specific requirements for integration and/or extension to either modules or functions. U8's customization platform (UAP) allows clients to enhance functionality quickly and independently.
